(54) Title: CLUSTERED INSTRUCTION LEVEL PARALLELISM PROCESSOR

(57) Abstract: The basic idea of the invention is to provide a clustered ILP processor based on a fully-connected inter-cluster network with a non-uniform latency. A clustered Instruction Level Parallelism processor is provided. Said processor comprises a plurality of clusters (C1 - C6) each comprising at least one register file (RF) and at least one functional unit (FU), wherein said clusters (C1 - C6) are fully-connected to each other; and wherein the latency of the connections between said clusters (C1 - C6) depends on the distance between said clusters (C1 - C6).

\* Special categories of cited documents:

- \*A\* document defining the general state of the art which is not considered to be of particular relevance
- \*E\* earlier document but published on or after the international filing date
- \*L\* document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
- \*O\* document referring to an oral disclosure, use, exhibition or other means
- \*P\* document published prior to the international filing date but later than the priority date claimed

- \*T\* later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
- \*X\* document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
- \*Y\* document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.
- \*&\* document member of the same patent family
